<BODY BGCOLOR="#A0C0A0">

<hr>

<center> <h2> Introduction to Static HTML Pages </h2> </center>

<font size=4>
<p>
  This is a paragraph.  Here you can write whatever you like.
</p>

<font size=4, color="#ff0000"> This sentence is in bright red.</font>

<p>
  Let's include a picture.  <br> Here is a friendly penguin:
<p>
<center>
  <img src=penguin.gif height=200>
</center>
</p>

To get the fishy file <a href=fish.pdf> Click here </a>

<p>
  We can also include audio files.  Most browsers should be
  able to handle the <b>.ogg</b> format.  Click the play symbol
  to listen.
</p>

<center> <p>
<audio src=fun.ogg controls preload="auto" autobuffer> </audio>
</p> </center>

<p>
  If the browser does not support the <b>.ogg</b> format, we can
  use the <b>.wav</b> format.

<center> <p>
<audio src=fun.wav controls preload="auto" autobuffer> </audio>
</p> </center>

<p>
  Ok, we're writing <b>hypertext</b>.  That means we can link
  to other documents.  <a href=http://menehune.opt.wfu.edu/csc101>Here </a>
  is a link to our home page.
</p>

<p>
  It is also easy to create lists in HTML.  Here's an example

  <ul>
    <li> This is the first item on the list. </li>
    <li> This is the second item on the list. </li>
    <li> This is the third and final item on the list. </li>
  </ul>

</p>

<blockquote>
  The blockquote tag may be used to create a block of indented text.
</blockquote>
