<hr>

<center> <h2> Introduction to Static HTML Pages </h2> </center>

<font size=4>
<p>
  This is a paragraph.  Here you can write whatever you like.
</p>

<p>
  Let's include a picture.  <br> Here is a friendly penguin:
<p>
<center>
  <img src=penguin.gif>
</center>
</p>

<p>
  We can also include audio files.  Most browsers should be
  able to handle the <b>.ogg</b> format.  Click the play symbol
  to listen.
</p>

<center> <p>
<audio src=fun.ogg controls preload="auto" autobuffer> </audio>
</p> </center>

<p>
  If the browser does not support the <b>.ogg</b> format, we can
  use the <b>.wav</b> format.

<center> <p>
<audio src=fun.wav controls preload="auto" autobuffer> </audio>
</p> </center>

<p>
  Ok, we're writing <b>hypertext</b>.  That means we can link
  to other documents.  <a href=http://menehune.opt.wfu.edu/csc101>Here </a>
  is a link to our home page.
</p>

<p>
  It is also easy to create lists in HTML.  Here's an example

  <ul>
    <li> This is the first item on the list. </li>
    <li> This is the second item on the list. </li>
    <li> This is the third and final item on the list. </li>
  </ul>

</p>

<blockquote>
  The blockquote tag may be used to create a block of indented text.
</blockquote>

Here is our last HTML construct: a <b>table</b>.
<center>
```

```
<table>
  <tr><td> This is the upper left stuff </td>
    <td> This is the upper middle stuff </td>
    <td> This is the upper right stuff </td>
  </tr>
  <tr><td> This is the next row left stuff </td>
    <td> This is the next row middle stuff </td>
    <td> This is the next row right stuff </td>
  </tr>
  <tr><td> This is the bottom row left stuff </td>
    <td> This is the bottom row middle stuff </td>
    <td> This is the bottom row right stuff </td>
  </tr>
</table>
</center>
```

That's great, but not a very nice looking table. Let's try again. We can use a special character to make horizontal space.

```
<center>
<table>
  <tr><td> This is the upper left stuff    &nbsp; &nbsp; &nbsp; </td>
    <td> This is the upper middle stuff    &nbsp; &nbsp; &nbsp; </td>
    <td> This is the upper right stuff     &nbsp; &nbsp; &nbsp; </td>
  </tr>
  <tr><td> This is the next row left stuff &nbsp; &nbsp; &nbsp; </td>
    <td> This is the next row middle stuff &nbsp; &nbsp; &nbsp; </td>
    <td> This is the next row right stuff &nbsp; &nbsp; &nbsp; </td>
  </tr>
  <tr><td> This is the bottom row left stuff  &nbsp; &nbsp; &nbsp; </td>
    <td> This is the bottom row middle stuff &nbsp; &nbsp; &nbsp; </td>
    <td> This is the bottom row right stuff  &nbsp; &nbsp; &nbsp; </td>
  </tr>
</table>
</center>
```

Or, we can use the border feature of the table tag to put some lines into the table.

```
<center>
<table border=3>
  <tr><td> This is the upper left stuff    &nbsp; &nbsp; &nbsp; </td>
    <td> This is the upper middle stuff    &nbsp; &nbsp; &nbsp; </td>
    <td> This is the upper right stuff     &nbsp; &nbsp; &nbsp; </td>
  </tr>
  <tr><td> This is the next row left stuff  &nbsp; &nbsp; &nbsp; </td>
    <td> This is the next row middle stuff &nbsp; &nbsp; &nbsp; </td>
    <td> This is the next row right stuff  &nbsp; &nbsp; &nbsp; </td>
  </tr>
  <tr><td> This is the bottom row left stuff  &nbsp; &nbsp; &nbsp; </td>
    <td> This is the bottom row middle stuff &nbsp; &nbsp; &nbsp; </td>
    <td> This is the bottom row right stuff  &nbsp; &nbsp; &nbsp; </td>
  </tr>
</table>
</center>
```

```
<br>
<hr>
<br>

</BODY>
</HTML>
```
