

Getting started in the Unix (Xubuntu) Environment.

Our first computer based exercise is to help you get familiar with the working environment that we will use this semester.

Your Tasks:

1. Carefully read the handout entitled “Programming and Development Environment”.
2. Follow the directions and install **X2Go** on your computer.
3. Use your account name and password (given in class), connect to gottlieb.cs.wfu.edu using your newly installed **X2Go** client software. No need to do much on gottlieb at this point, just make sure you can connect (full-screen) and can logout.
4. Read the Unix tutorial. See the web page:

<http://mehune.opt.wfu.edu/Unix>

5. As you work through each section, you are encouraged to log on to gottlieb.cs.wfu.edu and try some examples. At the end of most sections, there is a quiz. On gottlieb.cs.wfu.edu, use the text editor **emacs** to write your answers to each question in the quiz. The last section (section seven) does not have a quiz.
Save your written answers in a text file named **answers.txt**. Be sure to include your name at the beginning of the file.
6. When you have worked through all tutorial sections, upload your answers to your account on **telesto**. Recall there is a section on how to upload files in Unix Tutorial #2.
